Physical Security Guide

01 Planning/Prep

- Create a threat model of your most likely risks (disaster, power outage, etc...)
- Track/tag valuable assets
- Have a go bag for emergencies with what you need

Note: Your go bag should be prepared for at least 3 days and check it a couple times a year

02 Your Environment

- Have alarms and cameras where you feel they are most appropriate
- Use padlocks and deadbolts that you trust
- Keep outdoor spaces reasonably well lit

Lock recommendations:
Padlock: Abus 8345
Deadbolt: Schlage Primus

Camera recommendations:
Anything HikVision or Reolink

03 Backups and Spares

- Have spares of your important medications
- Have backups of important documents and phone numbers
- Have extra chargers/battery banks, water, and food on hand*

* The average power outage is ~2 hours in the US and up to 5+ days during a disaster

For digital backups, follow the 3-2-1 rule: 3 copies, on 2 different devices, with 1 off-site

Note: This Red Panda will be very sad if you don't backup your documents and data properly.
